

Box 36
State House Extension
Sunday, Dec. 30 '94.

Warren H. Manning Esq.
Dear Sir -

Yours of 15th duly recd.
As I wrote you last spring or
summer, I do not collect
plants, i.e. I do not preserve them.
If you insist that plants must
be shown as proof of collecting,
why then "I am not in it." I have
found several species not in
that very incomplete list (it
seemed & me,) issued last fall,
among them Aster ericoides and
Lespedeza dillenii; also Aster
paniculatus. The cards you refer to
I have not, and perhaps do not need
them in my view of the matter. Please
find enclosed a West Quincy ticket
which is properly yours.

Very respy.
H. A. Purdie.

✓
A. microras

~~parva~~

Desm. Dillen

M.?

H. A. D.

Dear Mr Deane. I certainly never
marked any cards as you say those
were indexed. I sent some speci-
mens to Dr. Swan who especially
Callitriche who was in doubt about
them but thought some of them
might be *C. heterophylla*.

Some errors I made in the 1894
Card Catalogue were corrected
in the 1895 Prelim. list. The *M.*
diffusa was collected in the same
locality as *Solanum carolinense*
& *Veronica officinalis* but another
visit to the same place last Sept.
showed they were not strictly in
side the Reservation line and
I think I did not note ^{them} ~~it~~ in the
Prelim. list.

Yours truly

W. P. R.

Boston Jan'y. 22/96.

Dear Mr. Deane

Your several notes of the last few days have been received and I will answer them as follows.

1. Have I a double in this business, or did I after a day's excursion into the Reservations, rise in my perplexed sleep and under some-nambulistic influence write the cards which you say bear my initials?

I have often in my dreams found rare plants but never in my waking hours have I written their names upon paper and sent them to headquarters.

No, I cannot claim the honor of naming *Solidago rugosa* x *serotina* S & M.

If you succeed in solving the mystery of those cards do let me know.

2. *Aster undulatus*. If you refer to the Card Catalogue, M. S. C. in rocky woods, refers to both Reservations. I find it in my note-book from S. under date of Sept. 6.

3. *Arctium Lappa*. I did not at the time of noting this plant remember that there were several varieties.

lies of it and as I did not collect a specimen
cannot say positively which variety it was, but
it appeared to me to be the common plant of
our roadsides and fields.

Write as often as you think I can be of any
service to you

With kind regards

Wm. P. Rich

My cant say as
to Lappa.

Dear Mr Deane. So it appears that
Dr. Swan is the writer of those
mysterious cards. I turned over to him
nearly all my collections of Juncus
Carex & Grasses according to instruction.
I have specimens of all the Juncus you
mention except var. Coarctatus,
which Dr. S. can probably supply.
Shall I send them to you?

Isn't there some mistake about credit-
ing me with Lac. integrifolius I find
no mention of it in my note books.
My Sagittaria was noted before the pub-
lication of Smith's revision so cannot
give any further information concern-
ing it.

My Naias gracillima was pronounced
correct by Mr. Fernald. I have some
more specimens from No. Reservoir which
I can send you, and possibly among my
duplicates some from Spot Pd.

Would it not be well to ask Dr. Swan
about that Lemna trisulca & C. hetero-
phylla he reported?

Hoping to receive your further favors
I am yours truly
Boston Jan'y 28.

Dear Mr. Deane

Perhaps I had better send you
some of the plants mentioned
in your recent notes, for
verification, especially *Carex*
st. var. invisa & *C. tribuloides*

I have some *Najas gracilissima*?
duplicates & will send some.
Will also send a suite of *C.*
echinata var. *cephalantha* (?)!

Have delayed sending them think-
ing there might be some more
you would want to verify.

How about the Grasses?

Should be pleased to see your Herb-
arium some time.

Thanks for your notes on *Callitriche*.
Will leave a package at Hort. Hall
Saturday or Monday Jan. 31.

Mr. Wadler Deane.

Cambridge

9 Brewster St.

Mass.

Dear Mr. Deane.

I have noted Aspid. marg. M. & S.
Onoclea sensib. M & S.

Osmunda Cinnam. M & S. but have
preserved no specimens of them.

I think I mentioned in my Card Catal.
that Selagin. apus was collected by
the late H. A. Fernald at the base of Bear
den ~~and~~ ^{and} about 1880 or 1882 I visited

the spot in his company and col-
lected it myself, but ~~un~~ ^{un}fortunately
a few years ago having ~~collected~~ ^{received} some

better spec. ~~from~~ ^{from} Deane I discarded
the Deane's plant so have
nothing to prove my statements.

I confidently expect to find the
spec. in Fernald's herbarium which
is in my hands but looking for it

this a.m. could not find it and
immediately added that I looked for it
at the old locality in 1894 & 5 without
success. So perhaps it had better be

omitted from the list. I shall make
a point to look it up more carefully
this year. I have seen Mr. Deane

and he requests me to report these notes
to you.

GRAY HERBARIUM OF HARVARD UNIVERSITY,

BOTANIC GARDEN, CAMBRIDGE, MASS.,

3rd June, 1895

Dear Sir:

Thank you very much for the permission to botanize upon the Park Reservations, and for the maps, lists, and general information regarding the botanical work of the commission, all of which I have found of considerable interest. While not able through pressure of other matters to do much field-work personally still I get out whenever I can and shall take especial pleasure in rendering the Park Commission any assistance in my power, in their worthy undertaking.

We are just now in position

to report the occurrence
in the Haverly Oaks Reser-
vation of a most interes-
ting plant collected there
at different times by Mr
Fernald, Mr Greenman, and
myself. It is the Ranuncu-
lus Alleghaniensis, Britton
recently described in the
Torrey Bulletin from the
mountains of Virginia and
North Carolina. So far as
we yet know this is the
~~only~~ locality north of that
region at which the species
occurs but it is probable
that it will be found
at intermediate points as
soon as people understand
about its inconspicuous but
apparently constant differ-
ences from the common
R. abortivus.

Very truly yours,
M. W. Manning. B. L. Robinson,

79 Worcester St. Jan. 7/96.

Dear Mr. Brewer, You seem to have —
come ~~out~~ on top of that pile of hay, but
I guess meantime that you must be
banning for light hair.

Thanks for your notes on the
specimens.

Rich once sent me a large batch of
specimens which I examined and re-
turned at his request, with a certain
privilege as to desiderata. In that way,
Juncus cau. appr. var. subc. and *utricu-*
lata minor became mounted in my
herbarium. I depended upon R. to fur-
nish the P. F. herb. I will write and
ask him if he has duplicates, or if I
find he has not, will turn over my
sheets to the Pack.

I understand Hackel's name of the
common awnless wheat to be as I have
entered it in the provisional catalogue,
viz: *T. sativum vulgare muticum*. ?

If I am wrong I shall glad to have
you correct me.

The *Juncus aporensis* was not represented in my herb., and I was obliged to study it by the aid of Engelm's monogr. I do not think that it is the var., but that it lies between it & *longicaudatus*. When you get it please take a look at it, *utriculatus* minor is on Bailey's authority.

The *lunida* you refer to — is it the one with small short spikes? Did you find a few gross blunders which you delicately refrain from naming?

Is it too late to offer my sincere congratulations upon your elevation to generic distinction? You have them; anyhow. I won't say what I think of your merits in the case, nor ask whether you remain unblemished.

Sincerely yours

Chas. W. Swan,

Dear Mr. Seane: Please accept these notes just as I have jotted them down in pencil in process of looking up. Plants outside of my Park Flora province I did not generally examine, thinking the work would fall to the proper hands. But I had no business to write cards & make trouble, — probably did so as memoranda, without a thought of being personally responsible.

But if you find that 4-foot carex & that I have misnamed it, I beg you will let me know your correction: Vasey & Scribner gave respectively different names to the same specimens of the dichotomum group. I have preferred to go by Scribner himself and his names of Tenn. But Scribner considers his names more or less provisional. How, then, can I throw any light on the subject except by reflection in the best mirror at my command?

I am sorry for you in your trials & tribulations — Truly yours Chas W Swan
Jan. 30 1906.

C. praeox. "Belarus" under the apple tree,
near W. Rybany. 5.VI.81, in herb garden,
left margin. The hill which then had a
round tower on it.

3. 4-ft. high *Thymus* which
I collect *g. mirabilis* at BB. It grows
in among the plants, common. It is not
in my *herbarium*.

C. canescens *pulchellus*. I have no
specimens. It is a card that
I should not care to be kept, which
in the name *pulchellus* is. The
specimen I have it - it is not
I say you do not.

P. dichotomum var. *viride* *lanceolatum* is
essentially what *lanceolatum* is.
P. dichotomum, *lanceolatum*, without any
essential additions. I have found
the same, apparently.

P. lanceolatum (L., *fide* *Scudder*, is the
common villos *lanceolatum* (2/3")
generally-called *dichotomum*. The
name *lanceolatum* is not in clear under
which *lanceolatum* (2/3") is belongs

The plant is generally decumbent & branched
with small, rounded, dark-green. The
leaves are 15-25, of some 10-15 to
primary stem, some discolor; it
is not = *pubescens*, Lam., which, ac-
cording to Scutner is 1/2 inch long
1" long.

I don't know how *Senecio* *truncata* came
about. I have a specimen in my collection, in
my handwriting, as if copied from Rich's
label - *Senecio truncata*, L., in fruit,
from Seneca, Mass., Stearns' Port. Blue-
hill Reservation, Sep. 3, 1904, det. from
Rich's. It is *L. Valtroviana* =
Senecio sp. I must have put in the
card without examination. I sent that
label, I don't have inserted the name,
an authority etc.

There is a impression that among the
plants sent in Rich was collected
Calitriche heterophylla, but I wrote the
name, I did so, in fact, for I certainly
have not examined a plant. The genus
in connection with the Park Flora. In
fact, I remember formerly to have had
difficulty in making my specimens fit
the Manual descriptions.

Boston. Feb. 12/96.

Dear Mr Seane: I seem to remember *M.*
mxicana among Rich's plants, but do not
recall the locality. A single specimen.

P. clandestinum without a panicle I de-
termined from the leaves & sheaths - Rich's coll.
a, alba, awned, I distinctly remember collecting
near the oaks on the moraine, & Rich sent
me similar plants, - locality uncertain.

C. triloboides, Type, I have ~~not~~ no trace of.
Ask Rich about this list,

I thought your labors were at an end,
and apologise for giving you perennial
trouble.

Sincerely yours,

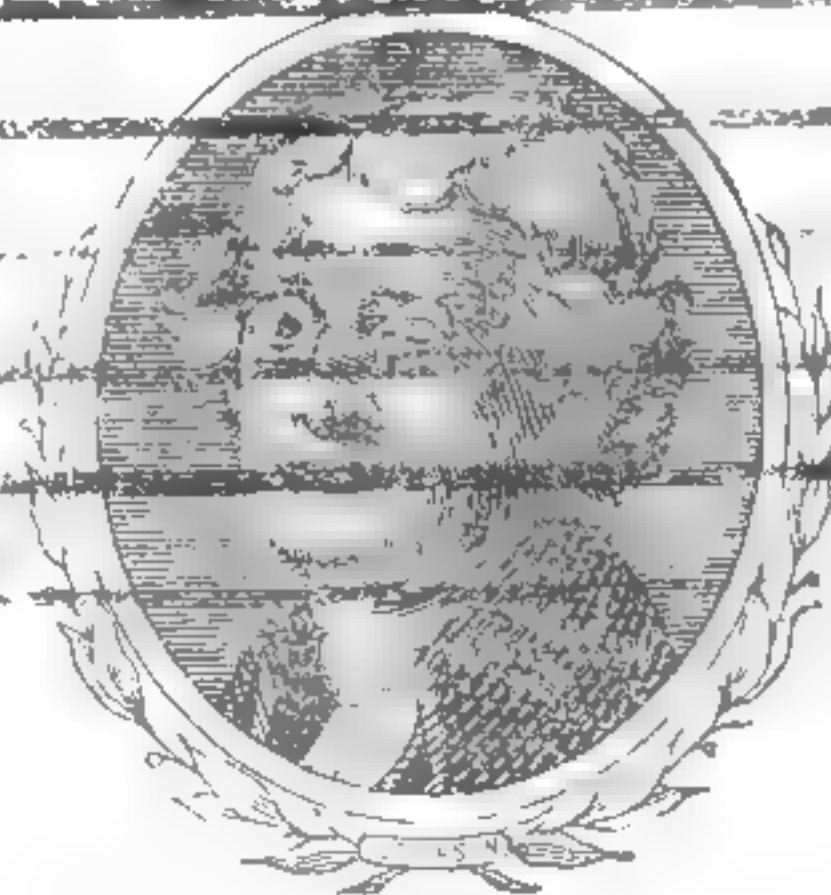

Charles Swan

I have been through herb. & duplicates
on this search, & have found nothing.

Dear Mr Deane, Mr Kidder
has the specimen of *Hab. Hookeri*.
We have not found any in the last two
years. I have specimens of *Microstylis. Liparis*
and *Hab. psycodes* growing in the Reservation, but
I have not specimens from there; at any rate, not of
Liparis. Do not publish exact localities. These
are botanists, and on the commission to exter-
minate every thing interesting. I want to correct
my list of the Pink family &c. As soon as I can
compare the specimens with those in Mr Kidder's
herbarium. My list is incorrect, Mr K. will look over the
specimens with me next week. Yours in haste, J. R. Webster
Jan. 28.
E. Milton is my address, but this is from Boston P. O.

POSTAL CARD - ONE CENT.

THIS SIDE IS FOR THE ADDRESS ONLY.

Mr Walter Deane,

Cambridge,

9 Brewster St.

Mass.

Dear Mr Deane;

On the last map of Blue Hill Reservation, (not Stoneham), the hill at the base of which *Liparis* has been found is called Buck Hill. My son Hollis found a specimen several years ago, and a year and a half ago he showed Mr Kidder and me several plants, one of which Mr Kidder took, but it was too late in the season to secure good specimens. We did not want to exterminate the species in that locality, and refrained from taking more specimens.

Three or four years ago Mr Kidder and I saw what we suppose to have been *Habenaria Hookeri*. Mr Kidder has the first specimen that he found, and I think that we afterwards saw three others. We have failed to find any since.

Habenaria tridentata grows with
Microstylis in the cedar swamp.
But there are so few plants that
I should hesitate to say more in
print than that they, as well as
Liparis are found within the Reserve.
The cedar swamp and its neighborhood
make a botanist's paradise, and
there is already a path too near
the spots where the rarities grow.

I am told that the red pine for-
mally grew in the swamp, so it is
to be looked for. Mr Kidder thought that
he saw a young larch near the *Liparis*
ground.

I can show you a very small
bed of *Epigaea repens*, but one May-day
couple could root it all up.

I have a few specimens
which belong to the Commission,
two or three of which I have incorrectly
named. I will send you the list,
(and the plants, if you wish), very soon.

Yours truly,
J. R. Webster,

I have found *Corallorhiza innata*.
Mr Manning has found *C. odontorhiza*,
I believe.

(More anon.)

East Milton.
